

The defibrillator must be positioned in high visibility spots in order to be quickly identified in case of cardiac arrest: its location is therefore more appropriated inside an easy to use cabinet, to save precious time in urgent situations where every second counts. Our cabinet provided in customized Video Screen or Totem version, will easily raise public awareness, advertising the life saving initiative and appealing potential new sponsors. In fact, besides cabinet's main function to contain, protect and give visibility to the defibrillator, including an alarm system for door opening, our product is a high communication impact tool (e.g. customization of the cabinet with illustrations for operation use in case of SCA).

**By opening the cabinet, just with a simple action, you'll be able to:**

- Call the Emergency Medical Services;
- Alert thousands of rescuers on their smartphones;
- Let them locate AED cabinet immediately;
- Allow the intervention of the closest rescuers;

**In summary ... you can save a life!**

#### AED Proximus Software

Through a centralized management system you can remotely monitor and manage your Defibrillator, 24 hours a day, 365 days a year.

#### Mobile App

An effective warning system allows you to call the Emergency Medical Services and simultaneously activate the network of rescuers with a single click.

**In summary... you can save a life!**

#### Mobile App

An effective warning system (Mobile App) allows to alert thousands of rescuers in case of SCA: it is not only directed to rescuers but also to all the people, because it allows you to:

- Call the Emergency Medical Services and simultaneously activate the network of rescuers with a single click
- Accept the request of help and be able to intervene in assistance
- Locate the AED's closest to you

Each request for assistance received directly through the App contains:

- Address of the emergency's place
- Key to call those who have requested help
- Map showing the nearest cabinet

As additional support, you can be guided by the sat nav.
